

Center for Polycystic Kidney Disease Research

7th Annual Symposium on Polycystic Kidney Disease

May 12th, 2014 (8:00 AM – 5:00 PM)

The Joseph B. Martin Conference Center at Harvard Medical School (Bray Room)
77 Avenue Louis Pasteur, Boston, MA 02115

This one day symposium is organized by the PKD Center (director, Jing Zhou, M.D., Ph.D.) and will focus on the new molecular mechanisms and therapeutic strategies underlying PKD.

TOPICS COVERED:

- Protein transport within the cilia
- Calcium signaling within cilia
- New PKD genes
- Left-right asymmetry and kidney cysts
- PKD proteins and cilia
- Cysts and stem Cells
- Cyst and the actin cytoskeleton
- Cilia ties the eye and kidney
- Modifying the lipids to treat PKD?
- New therapeutic horizons in PKD
- Current clinical trials

Presenters: Members of the PKD Center at various Harvard Institutions and other distinguished speakers.

Registration (including coffee breaks): Free to all attendees.

Seats are limited, so please register online at: <http://pkdsymposium.eventbrite.com/>

ADPKD is the most common life-threatening monogenic genetic disease, affecting more people than cystic fibrosis, muscular dystrophy, hemophilia, Down syndrome and sickle cell anemia - combined
