

Center for Polycystic Kidney Disease Research

11th Annual Symposium on Polycystic Kidney Disease

May 17th, 2018 (8:00 AM – 5:00 PM)

The Joseph B. Martin Conference Center at Harvard Medical School (Bray room)
77 Avenue Louis Pasteur, Boston, MA 02115

ADPKD is the most common life-threatening monogenic genetic disease, affecting more people than cystic fibrosis, muscular dystrophy, hemophilia, Down syndrome and sickle cell anemia - combined

Speakers

Members of the PKD Center at various Harvard Institutions and other distinguished speakers

This one day symposium is organized by the PKD Center (director, Jing Zhou, M.D., Ph.D.) and will focus on the current view of the primary cilium function, and molecular mechanisms and therapeutic strategies of PKD.

Topics Covered

- New insights into ciliogenesis
- Inversin and kidney cysts
- Polycystins and cilia
- ARPKD-like disease
- Nutrients, renal cystogenesis, and TSC
- From bench to the bedside - mechanisms and clinical development plan of a new therapeutic pathway
- Small molecules screens, cancers, cilia, and cysts
- A drug for PKD?
- Making kidney tubules
- and more

Registration

Free (including breakfast and coffee breaks) but seats are limited.

Register ASAP by scan QR or visit
